

Persons Added Per Acre 2000 - 2008

 City of Atlanta

Pop. and Emp. Data

"Densifying" Areas

This shows persons added per acres between 2000 and 2008 by Census Tract, to assess which areas are "densifying." As can be seen, the areas within the urban core had the largest gains in population density. One of the common themes among the top-gaining tracts is that they all are substantially larger than the more "urban" tracts. In looking at persons added per acre, then, we can see that all areas of the region are growing.
